Week of 10.16

Published: Tuesday, October 17, 2023

t/home.htm) This week in Earth Science we continue our study of Patterns in the Sky by kicking off our Project based approach. The objective is to plan a "long term" moon mission. Groups will need to understand how Earth-moon-sun interactions in order to plan their successful missions.

Last week we started with solar eclipses and created a physical model before explaining the model in our science notebooks.

This week:

Monday - continuing work on modeling patterns such as constellations, tides, sunrise/sunsets, northern lights

Tuesday - space web quest to understand prior NASA missions. HW: Learn about Artemis space suit and begin quality sketches of the spacesuit while studying details that allow astronauts to be safe in extreme environments

Wednesday - portfolio work. We will take a break from patterns and work on our portfolios together

Thursday - groups will have a pattern to begin researching

Annular Eclipse
